

Summary Prospectus – June 10, 2022

Before you invest, you may want to review the Fund’s prospectus, which contains more information about the Fund and its risks. You can find the Fund’s prospectus and other information about the Fund online at harborcapital.com/prospectus. You can also get this information at no cost by calling 800-422-1050 or by sending an email request to funddocuments@harborcapital.com. If you purchase shares of the Fund through a financial intermediary, the prospectus and other information will also be available from your financial intermediary. The current prospectus and statement of additional information, dated June 10, 2022, as amended or supplemented from time to time, are incorporated into this summary prospectus and may be obtained, free of charge, at the website, phone number or email address noted above.

Investment Objective

The Fund seeks to provide investment results that correspond, before fees and expenses, to the performance of the Quantix Energy Transition index (the “Index”).

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.80%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ^{1,2}	0.00%
Total Annual Fund Operating Expenses	0.80%

¹ Pursuant to the Investment Advisory Agreement, the Adviser pays all of the operating expenses of the Fund (inclusive of any expenses of a wholly owned subsidiary of the Fund), except for (i) the fee payment under the Investment Advisory Agreement; (ii) payments under the Fund’s 12b-1 plan (if any); (iii) the costs of borrowing, including interest and dividend expenses; (iv) taxes and governmental fees; (v) acquired fund fees and expenses; (vi) brokers’ commissions and any other transaction-related expenses and fees arising out of transactions effected on behalf of the Fund; (vii) costs of holding shareholder meetings; and (viii) litigation and indemnification expenses and other extraordinary expenses not incurred in the ordinary course of the Fund’s business.

² “Other Expenses” are based on estimated amounts for the current fiscal year.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other exchange-traded funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, under these assumptions, your costs would be:

One Year	Three Years
\$82	\$255

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities or other financial instruments (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when shares of the Fund are held in a taxable account. These costs, which are not reflected in the Annual Fund Operating Expenses or in the

Expense Example, do affect the Fund’s performance. The Fund had not commenced operations as of the date of this Prospectus and no portfolio turnover rate existed at the time of this publication.

Principal Investment Strategy

The Fund seeks to provide investment results that correspond, before fees and expenses, to the performance of the Index, which was developed by Quantix Commodities LP (“Quantix” or the “Subadviser”), the Fund’s subadviser, and is owned by its affiliate, Quantix Commodities Indices LLC (“QCI” or the “Index Provider”). The Index is composed of futures contracts on physical commodities associated with the accelerating transition from carbon-intensive energy sources, such as petroleum, crude oil and thermal coal, to less carbon-intensive sources of energy, such as natural gas, ethanol, wind power, and solar power. The Index is constructed using QCI’s proprietary quantitative methodology, as described below.

Under normal market conditions, the Index contains at least [10] commodity futures traded on exchanges in the United States (U.S.), Canada, United Kingdom (U.K.) and other European exchanges, determined based upon liquidity and ability to be traded in a cost-efficient manner, as determined by the Index Provider. A commodity futures contract is a legal agreement to buy or sell a particular commodity (for example, metals or agricultural products) at a predetermined price at a specified time in the future. Commodity futures that provide exposure to the energy transition theme are considered component candidates for inclusion in the Index. The commodities that comprise the Index serve one of the three purposes associated with the theme: (1) they are used to construct the new energy infrastructure (for example, copper, aluminum, and silver); (2) they are “bridge fuels” that are less carbon-intensive and will provide energy between now and the net-zero state (for example, natural gas); or (3) they incentivize investment in the new energy infrastructure (for example, carbon credits).

As of the date of this Prospectus, the following commodity futures are eligible for inclusion in the Index: copper, aluminum, nickel, zinc, lead, natural gas (U.S.), natural gas (U.K.), natural gas (Europe), silver, palladium, platinum, soybean oil, ethanol, emissions – European Union Allowances (EUA), and emissions - California Carbon Allowances (CCA).

Commodity futures from the component candidates are selected for the Index and weighted based on the Index Provider’s quantitative methodology, which involves two steps:

Step 1: For each eligible commodity contract, the Index Provider calculates the economic significance weight, or economic importance within the overall universe, based upon level of trading. Specifically, economic significance weight is calculated using a rolling average of the open interest (*i.e.*, the total number of outstanding contracts that have not been settled) in each futures contract relative to the sum of the open interest of the eligible universe, based on information published by the applicable futures exchanges.

Summary Prospectus

HARBOR ENERGY TRANSITION STRATEGY ETF

Step 2: The Index Provider applies maximum sector weights and maximum and minimum commodity weights to ensure diversification within the Index.

The Index includes provisions for rolling futures contracts as they approach maturity based on a predetermined schedule. “Rolling” means selling a futures contract as it nears its expiration date and replacing it with a new futures contract that has a later expiration date. If the price for the new futures contract is lower than the price of the expiring contract, then the market for the commodity is said to be in “backwardation.” In these markets, roll returns are positive. The term “contango” is used to describe a market in which the price for a new futures contract is higher than the price of the expiring contract. In these markets, roll returns are negative. The Index may include foreign currency denominated commodity futures contracts. Because the Index is not designed to generate returns from changes in foreign exchange rates, the Index methodology provides for the conversion of futures prices from local currencies into U.S. dollars and hedging the local currency exposure into U.S. dollars.

The Index is calculated on a “total return” basis, meaning that the returns of the futures contracts included in the Index are combined with the returns on cash collateral invested in 13-week U.S. Treasury Bills. Under normal circumstances, the Index is reconstituted monthly. QCI, as provider of the Index, is responsible for Index construction. The Index has been licensed to the Adviser by QCI and is calculated, published and distributed by Solactive AG (“Solactive”), the Index calculation agent. The Subadviser is responsible for the day-to-day management of the Fund’s assets in accordance with the Fund’s investment objective, subject to the oversight of Harbor Capital Advisors, Inc. (“Harbor Capital” or the “Adviser”).

The Fund seeks to achieve its investment objective primarily by investing, through its Subsidiary (as defined below), in one or more excess return swaps on the Index. Excess return swaps are derivative contracts between two parties who exchange the return from a financial asset between them. The Fund will make payments to a swap dealer counterparty based on a set rate in exchange for payments based on the returns of the futures contracts comprising the Index. If the returns on those futures contracts are positive, the counterparty will pay the Fund; in the event that the returns are negative, the Fund will make payments to the counterparty. The swaps may be terminated by the Subadviser at any time. The Fund also holds U.S. Treasury securities, cash and/or money market funds, which may be used as collateral for the Fund’s derivatives holdings or to generate interest income and capital appreciation on the cash balances arising from its use of derivatives (thereby providing a “total return” investment in the underlying commodity futures contracts). Under normal circumstances, the Fund invests (directly or through its Subsidiary) at least 80% of its net assets, plus borrowings for investment purposes, in financial instruments and short-term investments that taken together are designed to provide investment results that correspond, before fees and expenses, to the performance of the Index.

The Fund may invest in commodity futures contracts if it at any time it is impractical or inefficient to gain full or partial exposure to a commodity through the use of excess return swaps, including on a different commodity (including commodities not included in the Index) that the Subadviser believes will help the Fund achieve its investment objective.

Although the Index applies certain maximum sector and commodity weights, a significant portion of the Index may consist of a particular sector or commodity. In such instances, the Fund is expected to have significant exposure to that sector or commodity. As of the

date of this Prospectus, a significant portion of the Index consists of, and therefore the Fund has significant exposure to, the base metals and natural gas sectors. Base metals, such as copper, aluminum, zinc, and lead, are common metals used in industry or manufacturing excluding iron-containing metals and alloys or precious metals, such as gold or silver.

The Fund will invest up to 25% of its total assets, as determined at the end of each fiscal quarter, in a wholly owned and controlled subsidiary (the “Subsidiary”) organized under the laws of the Cayman Islands. The Fund’s investment in the Subsidiary is expected to provide the Fund with exposure to commodity returns within the limits of the federal tax laws, which limit the ability of investment companies such as the Fund to invest directly in such instruments. The Subsidiary has the same investment objective and will follow the same general investment policies and restrictions as the Fund. Unlike the Fund, the Subsidiary may invest without limitation in commodity-linked derivative instruments. The Subsidiary’s investment in derivative instruments, including excess return swaps, may have a leveraging effect on the Fund because of the leverage inherent in the use of derivatives. Except as noted, references to the Fund’s investment strategies and risks include those of its Subsidiary. The Subsidiary is advised by the Adviser and subadvised by the Subadviser.

The Fund is classified as non-diversified, which means the Fund may invest in the securities of a smaller number of issuers than a diversified fund.

Principal Risks

Investors considering an investment in the Fund should be prepared to accept significant volatility in the Fund’s performance, particularly over shorter time periods. The Fund is not intended to serve as a core holding in an investor’s portfolio but instead should represent only a small portion of an investor’s overall diversified portfolio. Investors considering an investment in this Fund should be sure they carefully read and understand the investment strategies employed and the heightened risks associated with those strategies.

There is no guarantee that the investment objective of the Fund will be achieved. Commodities and commodity-linked derivative instruments can be significantly more volatile than other securities, such as stocks or bonds. Similarly, the Index can be significantly more volatile than broad market equity and fixed income indices. The value of your investment in the Fund may go down, which means that you could lose money on your investment in the Fund or the Fund may not perform as well as other possible investments. Principal risks impacting the Fund (in alphabetical order after the first nine) include:

Commodity Risk: The Fund has exposure to commodities through its and/or the Subsidiary’s investments in commodity-linked derivative instruments. Commodity prices are generally affected by, among other factors, the cost of producing, transporting and storing commodities, changes in consumer or commercial demand for commodities, the hedging and trading strategies of producers and consumers of commodities, speculative trading in commodities by commodity pools and other market participants, disruptions in commodity supply, weather, political and other global events, global economic factors and government intervention in or regulation of the commodity or commodity futures markets. The Fund may concentrate its assets in a particular sector of the commodities market (such as metal, gas or emissions products) in order to seek to track the Index. As a result, the Fund may be more susceptible to risks associated with those sectors.

Excess Return Swaps Risk: Excess return swaps could result in losses if the underlying asset or reference does not perform as

Summary Prospectus

HARBOR ENERGY TRANSITION STRATEGY ETF

anticipated. Excess return swaps can have the potential for unlimited losses. They are also subject to counterparty risk. If the counterparty fails to meet its obligations, the Fund may lose money.

Index Construction Risk: Quantix selects a limited number of commodity futures contracts for the Index based on its proprietary methodology. The theories and assumptions upon which Quantix bases the Index and/or the methodology used in constructing the Index may be inaccurate. The Fund may outperform or underperform other funds that invest in similar asset classes but employ different investment styles. QCI's assessment of a commodity and/or futures contract may differ from that of another investor or investment manager. Errors in the construction or calculation of the Index may occur from time to time and any such errors may not be immediately identified and corrected by QCI or Solactive, respectively, which may have an adverse impact on the Fund and its shareholders. There is no guarantee that the construction methodology will accurately provide the intended exposure. The Index methodology may result in omission of commodities that are otherwise relevant to the energy transition theme because such commodities do not have futures markets or have futures markets that are illiquid. In addition, the supply and demand dynamics of commodities included in the Index may be influenced by various factors unrelated to the Index's energy transition theme.

Sector Risk: To the extent that the Fund has significant exposure to a particular sector or commodity, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that sector or commodity will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or commodities.

Index Tracking Risk: The Fund is not expected to track the performance of the Index at all times with perfect accuracy. The Fund's return may not track the performance of the Index for a number of reasons. For example, tracking error may occur because of differences between the securities and other financial instruments held in the Fund's portfolio and those included in the Index, pricing differences (including, as applicable, differences between a security's price at the local market close and the Fund's valuation of a security at the time of calculation of the Fund's NAV), transaction costs incurred by the Fund, or the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest. Any transaction costs and market exposure arising from rebalancing the Fund's portfolio to reflect changes in the composition of the Index will be borne directly by the Fund and its shareholders. The Fund may not be able to invest in certain securities due to legal restrictions, potential adverse tax consequences or other regulatory reasons. The risk that the Fund may not track the performance of the Index may be magnified during times of heightened market volatility or other unusual market conditions. Index ETFs that track indices with significant weight in futures contracts issuers may experience higher index tracking risk than other ETFs that do not track such indices.

Index Strategy Risk: The Fund is managed to seek to track, before fees and expenses, the performance of the Index. As a result, the Adviser will not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. Thus, based on market and economic conditions, the Fund's performance could be lower than funds that actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more securities or other financial instruments.

Authorized Participant Concentration/Trading Risk: Only authorized participants ("APs") may engage in creation or

redemption transactions directly with the Fund. The Fund has a limited number of institutions that may act as APs and such APs have no obligation to submit creation or redemption orders. Consequently, there is no assurance that APs will establish or maintain an active trading market for the shares. This risk may be heightened to the extent that securities or other financial instruments held by the Fund are traded outside a collateralized settlement system. In that case, APs may be required to post collateral on certain trades on an agency basis (i.e., on behalf of other market participants), which only a limited number of APs may be able to do. In addition, to the extent that APs exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other AP is able to step forward to create or redeem Creation Units (as defined below), this may result in a significantly diminished trading market for shares, and shares may be more likely to trade at a premium or discount to the Fund's net asset value and to face trading halts and/or delisting. This risk may be heightened during periods of volatility or market disruptions.

Premium/Discount Risk: The market price of the Fund's shares will generally fluctuate in accordance with changes in the Fund's net asset value as well as the relative supply of and demand for shares on the Exchange. The Adviser cannot predict whether shares will trade below, at or above their net asset value because the shares trade on the Exchange at market prices and not at net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for shares will be closely related, but not identical, to the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. This may result in the Fund's shares trading significantly above (premium) or below (discount) the Fund's net asset value, which will be reflected in the intraday bid/ask spreads and/or the closing price of shares as compared to net asset value. However, given that shares can only be purchased and redeemed in Creation Units, and only to and from broker-dealers and large institutional investors that have entered into participation agreements (unlike shares of closed-end funds, which frequently trade at appreciable discounts from, and sometimes at premiums to, their net asset value), the Adviser believes that large discounts or premiums to the net asset value of shares should not be sustained. During stressed market conditions, the market for the Fund's shares may become less liquid in response to deteriorating liquidity in the market for the Fund's underlying portfolio holdings, which could in turn lead to differences between the market price of the Fund's shares and their net asset value.

Energy Transition Risk: The commodities included in the Index may become less representative of energy transition trends over time depending upon industry trends, global market conditions, demand constraints, and technological advancements in energy production and renewable energy sources. The Fund's investments may be significantly impacted by government and corporate policies related to the use of renewable energy technologies, such as electric vehicles, and power sources, such as solar, wind and hydrogen. These investments may also be negatively impacted by the policies and practices of governments, intergovernmental organizations, or corporations that promote or benefit fossil-based systems of energy production; reduced availability of renewable energy sources; slowdowns in new construction; seasonal weather conditions, extreme weather or other natural disasters; and threats of attack by terrorists on renewable energy assets.

Base Metals Risk: The price of base metals, such as copper, aluminum, nickel, zinc, and lead, can be impacted by overall market movements, changes in interest rates, energy and commodity prices, the global supply and demand for metals, factors that impact metal

Summary Prospectus

HARBOR ENERGY TRANSITION STRATEGY ETF

production, technological advances in the processing and mining of metals, and changes in economic and/or political conditions that may impact the price of metals and metals futures contracts.

Cash Transactions Risk: The Fund will effect some or all of its creations and redemptions for cash rather than in-kind. As a result, an investment in the Fund may be less tax-efficient than an investment in an ETF that effects all of its creations and redemptions in-kind. Because the Fund may effect redemptions for cash, it may be required to sell portfolio securities or other financial instruments in order to obtain the cash needed to distribute redemption proceeds. A sale of portfolio securities or other financial instruments may result in capital gains or losses and may also result in higher brokerage costs. To the extent costs are not offset by transaction fees charged by the Fund to APs, the costs of cash transactions will be borne by the Fund.

Commodity-Linked Derivatives Risk: The Fund's investments in commodity-linked derivative instruments (either directly or through the Subsidiary) and the tracking of an Index comprised of commodity futures may subject the Fund to significantly greater volatility than investments in traditional securities. The value of commodity-linked derivative instruments may be affected by prevailing spot prices for the underlying commodity, supply and demand, market activity, liquidity, economic, financial, political regulatory, geographical, biological or judicial events, and the general interest rate environment. Commodity-linked derivatives are subject to the risk that the counterparty to the transaction, the exchange or trading facility on which they trade, or the applicable clearing house may default or otherwise fail to perform. If all or a significant portion of the futures contracts reflected in the Index were to reach a negative price, you could lose your entire investment. Each trading facility on which the derivatives are traded has the right to suspend or limit trading in the instruments that it lists. Certain of the futures contracts in which the Fund may invest trade on non-U.S. exchanges that impose different requirements than U.S. exchanges. These futures contracts may be subject to additional risks, including greater price volatility, temporary price aberrations and the potential imposition of limits that constrain appreciation or cause depreciation of the prices of such futures contracts, as well as different and longer settlement periods. The Fund will incur certain costs as a result of its use of derivatives. The Fund's use of commodity-linked derivatives may also have a leveraging effect on the Fund's portfolio. Leverage generally magnifies the effect of a change in the value of an asset and creates a risk of loss of value on a larger pool of assets than the Fund otherwise would have had. The Fund is required to post margin in respect to its holdings in derivatives.

Counterparty Risk: A counterparty may be unwilling or unable to meet its contractual obligations. If the counterparty or its affiliate becomes insolvent, bankrupt or defaults on its payment obligations to the Fund, the value of an investment held by the Fund may decline. The Fund may also not be able to exercise remedies, such as the termination of transactions, netting of obligations and realization on collateral if such remedies are stayed or eliminated under special resolutions adopted in the United States or other jurisdictions.

In addition, the Fund may enter into swap agreements with a limited number of counterparties, which may increase the Fund's exposure to counterparty credit risk. Counterparties may be less willing to enter into transactions in stressed or volatile market conditions or may alter the terms they are willing to accept in such conditions. Further, there is a risk that no suitable counterparties will be willing to enter into, or continue to enter into, transactions with the Fund, which may cause the Fund not

to be able to achieve its investment objective or to change its investment objective.

Energy Sector Risk: The performance of energy-related commodities, including natural gas, is generally cyclical and highly dependent on energy prices. The market value of energy-related commodities may decline for many reasons, including, among others: changes in energy prices, exploration and production spending, and energy supply and demand; global political changes; terrorism, natural disasters and other catastrophes; changes in exchange rates; and government regulations, taxation policies, and energy conservation efforts. The energy sector has recently experienced increased volatility.

Emissions-Related Credits Risk: The Fund's performance may be more volatile as a result of its investments in emissions-related credits. Emissions-related credit prices may be affected by any number of factors, including, among others: technology; climate change, natural disasters and other catastrophes; changes in exchange rates; global political changes, and government regulations.

Foreign Currency Risk: Because the Index may include futures contracts denominated in foreign currencies, the Fund could be subject to currency risk. Currency risk is the risk that foreign currencies will decline in value relative to the U.S. dollar or, in the case of hedging positions, that the U.S. dollar will decline in value relative to the currency hedged. In either event, the dollar value of an investment in the Fund would be adversely affected. Although the Index methodology provides for hedging of foreign currency exposure, there is no guarantee that such hedging will be successful.

Geopolitical Risk: Geopolitical events may disrupt securities and commodity markets and adversely affect global economies. War, terrorism, sanctions, and related geopolitical events have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on U.S. and world economies and markets generally. Recent geopolitical events have led and are expected to continue to lead to instability in certain of the markets in which the Fund invests. During global market disruptions, the Fund's exposure to the other risks described in this Prospectus will likely increase. Market disruptions can also prevent the Fund from implementing its investment strategies for a period of time and achieving its investment objective. For example, a market disruption may adversely affect the orderly functioning of the securities or commodity markets and may cause the Fund's derivatives counterparties to discontinue offering derivatives on some underlying securities, reference rates, or indices, or to offer them on a more limited basis.

Interest Rate Risk: As interest rates rise, the values of fixed income securities held by the Fund are likely to decrease and reduce the value of the Fund's portfolio. Rising interest rates may lead to increased redemptions, increased volatility and decreased liquidity in the fixed income markets, making it more difficult for the Fund to sell its fixed income securities when the Subadviser may wish to sell or must sell to meet redemptions. During periods when interest rates are low or there are negative interest rates, the Fund's yield (and total return) also may be low or the Fund may be unable to maintain positive returns or minimize the volatility of the Fund's net asset value per share. The risks associated with changing interest rates may have unpredictable effects on the markets and the Fund's investments.

Investment in Other Investment Companies Risk: Investments in other investment companies (including money market funds) are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, shareholders bear both

Summary Prospectus

HARBOR ENERGY TRANSITION STRATEGY ETF

their proportionate share of expenses in the Fund and, indirectly, the expenses of the investment companies.

Market Risk: Securities markets are volatile and can decline significantly in response to adverse market, economic, political, regulatory or other developments, which may lower the value of securities or other financial instruments held by the Fund, sometimes rapidly or unpredictably. Events such as war, acts of terrorism, social unrest, natural disasters, the spread of infectious illness or other public health threats could also significantly impact the Fund and its investments.

New Fund Risk: There can be no assurance that the Fund will grow to or maintain an economically viable size, in which case the Board of Trustees may determine to liquidate the Fund. The Board of Trustees may liquidate the Fund at any time in accordance with the Declaration of Trust and governing law. As a result, the timing of the Fund's liquidation may not be favorable.

New Index Risk: The Index was created by and is owned and maintained by the Index Provider, and it has not previously been utilized for a registered fund, which may create additional risks for investing in the Fund. There can be no guarantee that the Index will operate as intended during volatile market conditions or over the course of a full market cycle.

Non-Diversification Risk: Because the Fund is non-diversified and may invest a greater percentage of its assets in securities of a single issuer, and/or invest in a relatively small number of issuers, it is more susceptible to risks associated with a single economic, political or regulatory occurrence than a more diversified portfolio.

Subsidiary Risk: By investing in the Subsidiary, the Fund is indirectly exposed to the risks associated with the Subsidiary's investments. The derivatives and other investments held by the Subsidiary generally are similar to those that are permitted to be held by the Fund and are subject to the same risks that apply to similar investments if held directly by the Fund. The Subsidiary is not registered under the Investment Company Act of 1940 (the "Investment Company Act"), and, unless otherwise noted in this prospectus, is not subject to all of the investor protections of the Investment Company Act. In addition, changes in the laws of the United States and/or the Cayman Islands could result in the inability of the Fund and/or the Subsidiary to operate as described in this Prospectus and the *Statement of Additional Information* and could adversely affect the Fund.

Tax Risk: The ability of the Fund to gain commodity exposure as contemplated may be adversely affected by future legislation, regulatory developments, interpretive guidance or other actions by the Internal Revenue Service ("IRS") or the Treasury Department.

U.S. Treasury Obligations Risk: U.S. Treasury obligations may differ from other securities in their interest rates, maturities, times of issuance and other characteristics. Similar to other issuers, changes to the financial condition or credit rating of the U.S. government may cause the value of the Fund's exposure to U.S. Treasury obligations to decline.

Performance

Because the Fund is newly organized and does not yet have a complete calendar year of performance history, the bar chart and total return tables are not provided. Please note that the Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. To obtain performance information, please visit the Fund's website at harborcapital.com or call 800-422-1050.

Portfolio Management

Investment Adviser

Harbor Capital Advisors, Inc. ("Harbor Capital")

Subadviser

Quantix Commodities LP ("Quantix") has subadvised the Fund since 2022.

Portfolio Manager

The portfolio manager is primarily responsible for the day-to-day investment decision making for the Fund.

Matthew Schwab
Quantix Commodities LP

Mr. Schwab is a Portfolio Manager at Quantix and has served as a portfolio manager for the Fund since July 2022.

Buying and Selling Fund Shares

Individual Fund shares may only be bought and sold in the secondary market through a broker or dealer at a market price. Shares of the Fund are listed and traded on an exchange at market price throughout the day rather than at NAV and may trade at a price greater than the Fund's NAV (premium) or less than the Fund's NAV (discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares (bid) and the lowest price a seller is willing to accept for shares (ask) when buying or selling Fund shares in the secondary market (the "bid-ask spread"). Recent information, including information regarding the Fund's NAV, market price, premiums and discounts, and bid-ask spread, is available at harborcapital.com.

Tax Information

Distributions you receive from the Fund are subject to federal income tax and may also be subject to state and local taxes. These distributions will generally be taxed as ordinary income or capital gains, unless you are investing through a tax-deferred retirement account, such as a 401(k) plan or individual retirement account. Investments in tax-deferred accounts may be subject to tax when they are withdrawn.

Payments to Broker-Dealers and Other Financial Intermediaries

The Fund and/or its related companies may pay intermediaries, which may include banks, broker-dealers, or financial professionals, for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your sales representative to recommend the Fund over another investment. Ask your sales representative or visit your financial intermediary's website for more information.
