Benoy Thomas

Benchmark 1 Name: Bloomberg US Aggregate Bond Index

Investment Philosophy:

The Harbor Ares Systematic Multi-Sector Income ETF is an actively managed multi-sector fixed income strategy that seeks income and total return through employing a structured investment process that utilizes a proprietary model-based framework in the asset allocation and security selection of both investment-grade and below investment-grade (high yield) bonds. The Fund seeks to achieve its objective by investing in liquid fixed income securities including corporate bonds, emerging market sovereign bonds, and fixed income derivative instruments.

MANAGER COMMENTARY

As of 06/30/2026

“The current economic picture is stable: low recessionary risk, a cautious U.S. Federal Reserve regaining credibility, and expectations for a decreasing global high-yield default rate.”

Ares Systematic Credit Limited

Market in Review

Risk markets posted solid gains during the second quarter of 2026, with U.S. equities (S&P 500 Index) up 15.2% and U.S. high yield (ICE BofA Index) up 2.5%. Risk markets started the quarter on strong footing as geopolitical risk in the Middle East stabilized and corporate earnings season showed resilience, with U.S. corporates enjoying buoyant operating margins. Toward quarter-end, weaker sentiment in technology names and record equity issuance events in the sector muted risky asset returns as volatility increased. Government bond yields closed the quarter slightly higher, with interest rate markets having sold off during the middle of the period on concerns that rates would remain higher for longer in the face of ongoing inflationary pressures.

Portfolio Performance

During the second quarter of 2026, the Harbor Ares Systematic Multi-Sector Income ETF (“ETF”) returned 2.15% (NAV), outperforming its benchmark, the Bloomberg US Aggregate Bond Index, which returned 0.67%. Positive fund returns were driven by the move tighter in credit spreads and security selection.

Performance data shown represents past performance and is no guarantee of future results. Past performance is net of management fees and expenses and reflects reinvested dividends and distributions. Investment returns and principal value will fluctuate and when redeemed may be worth more or less than their original cost. Returns for periods less than one year are not annualized. Current performance may be higher or lower and is available through the most recent month end at harborcapital.com or by calling 800-422-1050.

Shares are bought and sold at market price not net asset value (NAV). A fund’s NAV is the sum of all its assets less any liabilities, divided by the number of shares outstanding. Market price returns are based upon the closing composite market price and do not represent the returns you would receive if you traded shares at other times.

Harbor Ares Systematic Multi-Sector Income ETF

MANAGER COMMENTARY

As of 06/30/2026

Overweights and Underweights

The ETF is not managed versus a benchmark. The ETF’s interest rate duration position averaged about 3.6 years during the quarter, which had a negative impact on returns, as interest rates increased over the period.

Outlook

The current economic picture is stable: low recessionary risk, a cautious U.S. Federal Reserve regaining credibility, and expectations for a decreasing global high-yield default rate. Nonetheless, any changes to this relatively benign environment may contribute to increased market volatility that we think would benefit the ETF’s credit opportunity set over the medium term, balanced by a more defensive interest rate exposure.

IMPORTANT INFORMATION

Risks

Investing involves risk, principal loss is possible. Unlike mutual funds, ETFs may trade at a premium or discount to their net asset value.

All investments involve risk including the possible loss of principal. Fixed income securities fluctuate in price in response to various factors, including changes in interest rates, changes in market conditions and issuer-specific events, and the value of your investment in the Fund may go down. There is a greater risk that the Fund will lose money because they invest in below-investment grade fixed income securities and unrated securities of similar credit quality (commonly referred to as “high-yield securities” or “junk bonds”). These securities are considered speculative because they have a higher risk of issuer default, are subject to greater price volatility and may be illiquid. Because the Fund may invest in securities of foreign issuers, an investment in the Fund is subject to special risks in addition to those of U.S. securities. These risks include heightened political and economic risks, greater volatility, currency fluctuations, higher transaction costs, delayed settlement, possible foreign controls on investment, possible sanctions by government bodies of other countries and less stringent investor protection and disclosure standards of foreign markets.

Benchmarks

The Bloomberg US Aggregate Bond Index is an unmanaged index of investment-grade fixed-rate debt issues with maturities of at least one year. This unmanaged index does not reflect fees and expenses and is not available for direct investment.

The S&P 500 Index is an unmanaged index generally representative of the U.S. market for large capitalization equities. This unmanaged index does not reflect fees and expenses and is not available for direct investment.

The ICE BofA US High Yield Index (H0A0) Index is an unmanaged index that tracks the performance of below investment grade U.S. Dollar-denominated corporate bonds publicly issued in the U.S. domestic market. All bonds are U.S. dollar denominated and rated Split BBB and below. This unmanaged index does not reflect fees and expenses and is not available for direct investment.

Disclosures

Definitions

Duration is a commonly used measure of the sensitivity of the price of a debt security, or aggregate market value of a portfolio of debt securities, to change in interest rates. Modified Duration measures the change in the value of a security in response to the change in interest rates. Securities with a longer duration are more sensitive to changes in interest rates and generally have more volatile prices than securities of comparable quality with a shorter duration.

Investors should carefully consider the investment objectives, risks, charges and expenses of a fund before investing. To obtain a summary prospectus or prospectus for this and other information, visit harborcapital.com or call 800-422-1050. Read it carefully before investing.
